

Problem of the Week

Problem D

Left, Right, Left, Right, ...

Your friend writes down all of the integers starting from 0 in the following way:

Specifically, below every number there are two numbers: one on the left and one on the right. For example, below 3, the number 7 is on the left, and the number 8 is on the right. The numbers can be read in increasing order from top row to bottom row and from left-to-right within a row. Notice that we can get from 0 to 12 by going right (R), left (L) then right (R).

What number do you end at if you take the following path from 0:

$L \rightarrow L \rightarrow R \rightarrow L \rightarrow L \rightarrow R \rightarrow L \rightarrow R \rightarrow L \rightarrow R \rightarrow L$
